# On the Simple Closed Curve Property of the Circle and the Fashoda Meet Theorem 

Yatsuka Nakamura<br>Shinshu University<br>Nagano

#### Abstract

Summary. First, we prove the fact that the circle is the simple closed curve, which was defined as a curve homeomorphic to the square. For this proof, we introduce a mapping which is a homeomorphism from 2-dimensional plane to itself. This mapping maps the square to the circle. Secondly, we prove the Fashoda meet theorem for the circle using this homeomorphism.

MML Identifier: JGRAPH_3.

The terminology and notation used in this paper have been introduced in the following articles: [17], [5], [7], [1], [2], [11], [3], [12], [4], [13], [10], [18], [15], [16], [14], [8], [9], and [6].

## 1. Preliminaries

In this paper $x, y, z, u, a$ are real numbers.
We now state a number of propositions:
(1) If $x^{2}=y^{2}$, then $x=y$ or $x=-y$.
(2) If $x^{2}=1$, then $x=1$ or $x=-1$.
(3) If $0 \leqslant x$ and $x \leqslant 1$, then $x^{2} \leqslant x$.
(4) If $a \geqslant 0$ and $(x-a) \cdot(x+a) \leqslant 0$, then $-a \leqslant x$ and $x \leqslant a$.
(5) If $x^{2}-1 \leqslant 0$, then $-1 \leqslant x$ and $x \leqslant 1$.
(6) $\quad x<y$ and $x<z$ iff $x<\min (y, z)$.
(7) If $0<x$, then $\frac{x}{3}<x$ and $\frac{x}{4}<x$.
(8) If $x \geqslant 1$, then $\sqrt{x} \geqslant 1$ and if $x>1$, then $\sqrt{x}>1$.
(9) If $x \leqslant y$ and $z \leqslant u$, then $[y, z] \subseteq[x, u]$.
(10) For every point $p$ of $\mathcal{E}_{\text {T }}^{2}$ holds $|p|=\sqrt{\left(p_{1}\right)^{2}+\left(p_{2}\right)^{2}}$ and $|p|^{2}=\left(p_{1}\right)^{2}+$ $\left(p_{2}\right)^{2}$.
(11) For every function $f$ and for all sets $B, C$ holds $(f \upharpoonright B)^{\circ} C=f^{\circ}(C \cap B)$.
(12) Let $X$ be a topological structure, $Y$ be a non empty topological structure, $f$ be a map from $X$ into $Y$, and $P$ be a subset of $X$. Then $f \upharpoonright P$ is a map from $X \upharpoonright P$ into $Y$.
(13) Let $X, Y$ be non empty topological spaces, $p_{0}$ be a point of $X, D$ be a non empty subset of $X, E$ be a non empty subset of $Y$, and $f$ be a map from $X$ into $Y$. Suppose that $D^{\mathrm{c}}=\left\{p_{0}\right\}$ and $E^{\mathrm{c}}=\left\{f\left(p_{0}\right)\right\}$ and $X$ is a $T_{2}$ space and $Y$ is a $T_{2}$ space and for every point $p$ of $X \upharpoonright D$ holds $f(p) \neq f\left(p_{0}\right)$ and there exists a map $h$ from $X \upharpoonright D$ into $Y \upharpoonright E$ such that $h=f \upharpoonright D$ and $h$ is continuous and for every subset $V$ of $Y$ such that $f\left(p_{0}\right) \in V$ and $V$ is open there exists a subset $W$ of $X$ such that $p_{0} \in W$ and $W$ is open and $f^{\circ} W \subseteq V$. Then $f$ is continuous.

## 2. The Circle is a Simple Closed Curve

In the sequel $p, q$ denote points of $\mathcal{E}_{\mathrm{T}}^{2}$.
The function SqCirc from the carrier of $\mathcal{E}_{\mathrm{T}}^{2}$ into the carrier of $\mathcal{E}_{\mathrm{T}}^{2}$ is defined by the condition (Def. 1).
(Def. 1) Let $p$ be a point of $\mathcal{E}_{\mathrm{T}}^{2}$. Then
(i) if $p=0_{\mathcal{E}_{\mathrm{T}}^{2}}$, then $\operatorname{SqCirc}(p)=p$,
(ii) if $p_{\mathbf{2}} \leqslant p_{1}$ and $-p_{1} \leqslant p_{2}$ or $p_{2} \geqslant p_{1}$ and $p_{2} \leqslant-p_{1}$ and if $p \neq 0_{\mathcal{E}_{\mathrm{T}}^{2}}$, then $\operatorname{SqCirc}(p)=\left[\frac{p_{1}}{\sqrt{1+\left(\frac{p_{2}}{p_{1}}\right)^{2}}}, \frac{p_{2}}{\sqrt{1+\left(\frac{p_{2}}{\left.p_{1}\right)^{2}}\right.}}\right]$, and
(iii) if $p_{2} \nless p_{1}$ or $-p_{1} \nless p_{\mathbf{2}}$ but $p_{2} \ngtr p_{1}$ or $p_{2} \nless-p_{1}$ and $p \neq 0_{\mathcal{E}_{\mathrm{T}}^{2}}$, then $\operatorname{SqCirc}(p)=\left[\frac{p_{1}}{\sqrt{1+\left(\frac{p_{1}}{p_{2}}\right)^{2}}}, \frac{p_{2}}{\sqrt{1+\left(\frac{p_{1}}{\left.p_{2}\right)^{2}}\right.}}\right]$.
We now state a number of propositions:
(14) Let $p$ be a point of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $p \neq 0_{\mathcal{E}_{\mathrm{T}}^{2}}$. Then
(i) if $p_{1} \leqslant p_{2}$ and $-p_{2} \leqslant p_{1}$ or $p_{1} \geqslant p_{2}$ and $p_{1} \leqslant-p_{2}$, then $\operatorname{SqCirc}(p)=$ $\left[\frac{p_{1}}{\sqrt{1+\left(\frac{p_{1}}{p_{2}}\right)^{2}}}, \frac{p_{2}}{\sqrt{1+\left(\frac{p_{1}}{p_{2}}\right)^{2}}}\right]$, and
(ii) if $p_{1} \nless p_{2}$ or $-p_{2} \nless p_{1}$ and if $p_{\mathbf{1}} \ngtr p_{\mathbf{2}}$ or $p_{\mathbf{1}} \nless-p_{\mathbf{2}}$, then $\operatorname{SqCirc}(p)=$ $\left[\frac{p_{1}}{\sqrt{1+\left(\frac{p_{2}}{p_{1}}\right)^{2}}}, \frac{p_{2}}{\sqrt{1+\left(\frac{p_{2}}{p_{1}}\right)^{2}}}\right]$.
(15) Let $X$ be a non empty topological space and $f_{1}$ be a map from $X$ into $\mathbb{R}^{1}$. Suppose $f_{1}$ is continuous and for every point $q$ of $X$ there exists a real number $r$ such that $f_{1}(q)=r$ and $r \geqslant 0$. Then there exists a map $g$ from $X$ into $\mathbb{R}^{\mathbf{1}}$ such that for every point $p$ of $X$ and for every real number $r_{1}$ such that $f_{1}(p)=r_{1}$ holds $g(p)=\sqrt{r_{1}}$ and $g$ is continuous.
(16) Let $X$ be a non empty topological space and $f_{1}, f_{2}$ be maps from $X$ into $\mathbb{R}^{\mathbf{1}}$. Suppose $f_{1}$ is continuous and $f_{2}$ is continuous and for every point $q$ of $X$ holds $f_{2}(q) \neq 0$. Then there exists a map $g$ from $X$ into $\mathbb{R}^{\mathbf{1}}$ such that
(i) for every point $p$ of $X$ and for all real numbers $r_{1}, r_{2}$ such that $f_{1}(p)=r_{1}$ and $f_{2}(p)=r_{2}$ holds $g(p)=\left(\frac{r_{1}}{r_{2}}\right)^{2}$, and
(ii) $g$ is continuous.
(17) Let $X$ be a non empty topological space and $f_{1}, f_{2}$ be maps from $X$ into $\mathbb{R}^{\mathbf{1}}$. Suppose $f_{1}$ is continuous and $f_{2}$ is continuous and for every point $q$ of $X$ holds $f_{2}(q) \neq 0$. Then there exists a map $g$ from $X$ into $\mathbb{R}^{\mathbf{1}}$ such that
(i) for every point $p$ of $X$ and for all real numbers $r_{1}, r_{2}$ such that $f_{1}(p)=r_{1}$ and $f_{2}(p)=r_{2}$ holds $g(p)=1+\left(\frac{r_{1}}{r_{2}}\right)^{2}$, and
(ii) $g$ is continuous.
(18) Let $X$ be a non empty topological space and $f_{1}, f_{2}$ be maps from $X$ into $\mathbb{R}^{\mathbf{1}}$. Suppose $f_{1}$ is continuous and $f_{2}$ is continuous and for every point $q$ of $X$ holds $f_{2}(q) \neq 0$. Then there exists a map $g$ from $X$ into $\mathbb{R}^{\mathbf{1}}$ such that
(i) for every point $p$ of $X$ and for all real numbers $r_{1}, r_{2}$ such that $f_{1}(p)=r_{1}$ and $f_{2}(p)=r_{2}$ holds $g(p)=\sqrt{1+\left(\frac{r_{1}}{r_{2}}\right)^{2}}$, and
(ii) $g$ is continuous.
(19) Let $X$ be a non empty topological space and $f_{1}, f_{2}$ be maps from $X$ into $\mathbb{R}^{\mathbf{1}}$. Suppose $f_{1}$ is continuous and $f_{2}$ is continuous and for every point $q$ of $X$ holds $f_{2}(q) \neq 0$. Then there exists a map $g$ from $X$ into $\mathbb{R}^{\mathbf{1}}$ such that
(i) for every point $p$ of $X$ and for all real numbers $r_{1}, r_{2}$ such that $f_{1}(p)=r_{1}$ and $f_{2}(p)=r_{2}$ holds $g(p)=\frac{r_{1}}{\sqrt{1+\left(\frac{r_{1}}{r_{2}}\right)^{2}}}$, and
(ii) $g$ is continuous.
(20) Let $X$ be a non empty topological space and $f_{1}, f_{2}$ be maps from $X$ into $\mathbb{R}^{\mathbf{1}}$. Suppose $f_{1}$ is continuous and $f_{2}$ is continuous and for every point $q$ of $X$ holds $f_{2}(q) \neq 0$. Then there exists a map $g$ from $X$ into $\mathbb{R}^{\mathbf{1}}$ such that
(i) for every point $p$ of $X$ and for all real numbers $r_{1}, r_{2}$ such that $f_{1}(p)=r_{1}$ and $f_{2}(p)=r_{2}$ holds $g(p)=\frac{r_{2}}{\sqrt{1+\left(\frac{r_{1}}{r_{2}}\right)^{2}}}$, and
(ii) $g$ is continuous.
(21) Let $K_{1}$ be a non empty subset of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ into $\mathbb{R}^{\mathbf{1}}$. Suppose that
(i) for every point $p$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $p \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $f(p)=\frac{p_{1}}{\sqrt{1+\left(\frac{p_{2}}{p_{1}}\right)^{2}}}$, and
(ii) for every point $q$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $q \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $q_{1} \neq 0$.
Then $f$ is continuous.
(22) Let $K_{1}$ be a non empty subset of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ into $\mathbb{R}^{\mathbf{1}}$. Suppose that
(i) for every point $p$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $p \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $f(p)=\frac{p_{2}}{\sqrt{1+\left(\frac{p_{2}}{p_{1}}\right)^{2}}}$, and
(ii) for every point $q$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $q \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $q_{1} \neq 0$.
Then $f$ is continuous.
(23) Let $K_{1}$ be a non empty subset of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ into $\mathbb{R}^{1}$. Suppose that
(i) for every point $p$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $p \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $f(p)=\frac{p_{2}}{\sqrt{1+\left(\frac{p_{1}}{p_{2}}\right)^{2}}}$, and
(ii) for every point $q$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $q \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $q_{2} \neq 0$.
Then $f$ is continuous.
(24) Let $K_{1}$ be a non empty subset of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ into $\mathbb{R}^{\mathbf{1}}$. Suppose that
(i) for every point $p$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $p \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $f(p)=\frac{p_{1}}{\sqrt{1+\left(\frac{p_{1}}{p_{2}}\right)^{2}}}$, and
(ii) for every point $q$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $q \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $q_{2} \neq 0$.
Then $f$ is continuous.
(25) Let $K_{0}, B_{0}$ be subsets of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{0}$ into $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$. Suppose $f=$ SqCirc $\left\lceil K_{0}\right.$ and $B_{0}=\left(\right.$ the carrier of $\left.\mathcal{E}_{\mathrm{T}}^{2}\right) \backslash\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$ and $K_{0}=$ $\left\{p:\left(p_{\mathbf{2}} \leqslant p_{\mathbf{1}} \wedge-p_{\mathbf{1}} \leqslant p_{\mathbf{2}} \vee p_{\mathbf{2}} \geqslant p_{\mathbf{1}} \wedge p_{\mathbf{2}} \leqslant-p_{\mathbf{1}}\right) \wedge p \neq 0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$. Then $f$ is continuous.
(26) Let $K_{0}, B_{0}$ be subsets of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{0}$ into $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$. Suppose $f=$ SqCirc $\upharpoonright K_{0}$ and $B_{0}=\left(\right.$ the carrier of $\left.\mathcal{E}_{\mathrm{T}}^{2}\right) \backslash\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$ and $K_{0}=$ $\left\{p:\left(p_{1} \leqslant p_{2} \wedge-p_{2} \leqslant p_{1} \vee p_{1} \geqslant p_{2} \wedge p_{1} \leqslant-p_{2}\right) \wedge p \neq 0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$. Then $f$ is continuous.

In this article we present several logical schemes. The scheme TopIncl concerns a unary predicate $\mathcal{P}$, and states that:
$\left\{p: \mathcal{P}[p] \wedge p \neq 0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\} \subseteq\left(\right.$ the carrier of $\left.\mathcal{E}_{\mathrm{T}}^{2}\right) \backslash\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$
for all values of the parameters.
The scheme TopInter concerns a unary predicate $\mathcal{P}$, and states that: $\left\{p: \mathcal{P}[p] \wedge p \neq 0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}=\left\{p_{7} ; p_{7}\right.$ ranges over points of $\left.\mathcal{E}_{\mathrm{T}}^{2}: \mathcal{P}\left[p_{7}\right]\right\} \cap$ $\left(\left(\right.\right.$ the carrier of $\left.\left.\mathcal{E}_{\mathrm{T}}^{2}\right) \backslash\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}\right)$
for all values of the parameters.
Next we state several propositions:
(27) Let $B_{0}$ be a subset of $\mathcal{E}_{\mathrm{T}}^{2}, K_{0}$ be a subset of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$, and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0} \upharpoonright K_{0}$ into $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$. Suppose $f=\operatorname{SqCirc} \upharpoonright K_{0}$ and $B_{0}=$ (the
carrier of $\left.\mathcal{E}_{\mathrm{T}}^{2}\right) \backslash\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$ and $K_{0}=\left\{p:\left(p_{\mathbf{2}} \leqslant p_{\mathbf{1}} \wedge-p_{\mathbf{1}} \leqslant p_{\mathbf{2}} \vee p_{\mathbf{2}} \geqslant\right.\right.$ $\left.\left.p_{1} \wedge p_{2} \leqslant-p_{1}\right) \wedge p \neq 0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$. Then $f$ is continuous and $K_{0}$ is closed.
(28) Let $B_{0}$ be a subset of $\mathcal{E}_{\mathrm{T}}^{2}, K_{0}$ be a subset of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$, and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0} \upharpoonright K_{0}$ into $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$. Suppose $f=\operatorname{SqCirc} \upharpoonright K_{0}$ and $B_{0}=$ (the carrier of $\left.\mathcal{E}_{\mathrm{T}}^{2}\right) \backslash\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$ and $K_{0}=\left\{p:\left(p_{1} \leqslant p_{2} \wedge-p_{2} \leqslant p_{1} \vee p_{1} \geqslant\right.\right.$ $\left.\left.p_{\mathbf{2}} \wedge p_{\mathbf{1}} \leqslant-p_{\mathbf{2}}\right) \wedge p \neq 0_{\mathcal{E}_{\mathbf{T}}^{2}}\right\}$. Then $f$ is continuous and $K_{0}$ is closed.
(29) Let $D$ be a non empty subset of $\mathcal{E}_{\mathrm{T}}^{2}$. Suppose $D^{c}=\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$. Then there exists a map $h$ from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright D$ into $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright D$ such that $h=\operatorname{SqCirc} \upharpoonright D$ and $h$ is continuous.
(30) For every non empty subset $D$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $D=$ (the carrier of $\left.\mathcal{E}_{\mathrm{T}}^{2}\right) \backslash\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$ holds $D^{\mathrm{c}}=\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$.
(31) There exists a map $h$ from $\mathcal{E}_{\mathrm{T}}^{2}$ into $\mathcal{E}_{\mathrm{T}}^{2}$ such that $h=\mathrm{SqCirc}$ and $h$ is continuous.
(32) SqCirc is one-to-one.

Let us observe that SqCirc is one-to-one.
One can prove the following propositions:
(33) Let $K_{2}, C_{1}$ be subsets of $\mathcal{E}_{\mathrm{T}}^{2}$. Suppose that
(i) $K_{2}=\left\{q:-1=q_{1} \wedge-1 \leqslant q_{2} \wedge q_{2} \leqslant 1 \vee q_{1}=1 \wedge-1 \leqslant q_{2} \wedge q_{2} \leqslant\right.$ $\left.1 \vee-1=q_{2} \wedge-1 \leqslant q_{1} \wedge q_{1} \leqslant 1 \vee 1=q_{2} \wedge-1 \leqslant q_{1} \wedge q_{1} \leqslant 1\right\}$, and
(ii) $\quad C_{1}=\left\{p_{2} ; p_{2}\right.$ ranges over points of $\left.\mathcal{E}_{\mathrm{T}}^{2}:\left|p_{2}\right|=1\right\}$.

Then $\mathrm{SqCirc}^{\circ} K_{2}=C_{1}$.
(34) Let $P, K_{2}$ be subsets of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{2}$ into $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright P$. Suppose that
(i) $K_{2}=\left\{q:-1=q_{1} \wedge-1 \leqslant q_{2} \wedge q_{2} \leqslant 1 \vee q_{1}=1 \wedge-1 \leqslant q_{2} \wedge q_{2} \leqslant\right.$ $\left.1 \vee-1=q_{2} \wedge-1 \leqslant q_{1} \wedge q_{1} \leqslant 1 \vee 1=q_{2} \wedge-1 \leqslant q_{1} \wedge q_{1} \leqslant 1\right\}$, and
(ii) $f$ is a homeomorphism.

Then $P$ is a simple closed curve.
(35) Let $K_{2}$ be a subset of $\mathcal{E}_{\mathrm{T}}^{2}$. Suppose $K_{2}=\left\{q:-1=q_{1} \wedge-1 \leqslant q_{2} \wedge q_{2} \leqslant\right.$ $1 \vee q_{1}=1 \wedge-1 \leqslant q_{2} \wedge q_{2} \leqslant 1 \vee-1=q_{2} \wedge-1 \leqslant q_{1} \wedge q_{1} \leqslant 1 \vee 1=$ $\left.q_{2} \wedge-1 \leqslant q_{1} \wedge q_{1} \leqslant 1\right\}$. Then $K_{2}$ is a simple closed curve and compact.
(36) For every subset $C_{1}$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $C_{1}=\left\{p ; p\right.$ ranges over points of $\mathcal{E}_{\mathrm{T}}^{2}$ : $|p|=1\}$ holds $C_{1}$ is a simple closed curve.

## 3. The Fashoda Meet Theorem for the Circle

Next we state a number of propositions:
(37) Let $K_{0}, C_{0}$ be subsets of $\mathcal{E}_{\mathrm{T}}^{2}$. Suppose $K_{0}=\left\{p:-1 \leqslant p_{\mathbf{1}} \wedge p_{\mathbf{1}} \leqslant\right.$ $\left.1 \wedge-1 \leqslant p_{2} \wedge p_{2} \leqslant 1\right\}$ and $C_{0}=\left\{p_{1} ; p_{1}\right.$ ranges over points of $\mathcal{E}_{\mathrm{T}}^{2}$ : $\left.\left|p_{1}\right| \leqslant 1\right\}$. Then $\operatorname{SqCirc}^{-1}\left(C_{0}\right) \subseteq K_{0}$.
(38) Let given $p$. Then
(i) if $p=0_{\mathcal{E}_{\mathrm{T}}^{2}}$, then $\operatorname{SqCirc}^{-1}(p)=0_{\mathcal{E}_{\mathrm{T}}^{2}}$,
(ii) if $p_{2} \leqslant p_{1}$ and $-p_{1} \leqslant p_{2}$ or $p_{2} \geqslant p_{1}$ and $p_{2} \leqslant-p_{1}$ and if $p \neq 0_{\mathcal{E}_{\mathrm{T}}^{2}}$, then $\operatorname{SqCirc}^{-1}(p)=\left[p_{1} \cdot \sqrt{1+\left(\frac{p_{2}}{p_{1}}\right)^{2}}, p_{2} \cdot \sqrt{1+\left(\frac{p_{2}}{p_{1}}\right)^{2}}\right]$, and
(iii) if $p_{2} \nless p_{1}$ or $-p_{1} \nless p_{2}$ but $p_{2} \ngtr p_{1}$ or $p_{2} \nless-p_{1}$ and $p \neq 0_{\mathcal{E}_{\mathrm{T}}^{2}}$, then $\operatorname{SqCirc}^{-1}(p)=\left[p_{1} \cdot \sqrt{1+\left(\frac{p_{1}}{p_{2}}\right)^{2}}, p_{2} \cdot \sqrt{1+\left(\frac{p_{1}}{p_{2}}\right)^{2}}\right]$.
(39) $\mathrm{SqCirc}^{-1}$ is a map from $\mathcal{E}_{\mathrm{T}}^{2}$ into $\mathcal{E}_{\mathrm{T}}^{2}$.
(40) Let $p$ be a point of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $p \neq 0_{\mathcal{E}_{\mathrm{T}}^{2}}$. Then
(i) if $p_{1} \leqslant p_{2}$ and $-p_{2} \leqslant p_{1}$ or $p_{1} \geqslant p_{2}$ and $p_{1} \leqslant-p_{2}$, then $\operatorname{SqCirc}^{-1}(p)=$ $\left[p_{1} \cdot \sqrt{1+\left(\frac{p_{1}}{p_{2}}\right)^{2}}, p_{2} \cdot \sqrt{1+\left(\frac{p_{1}}{p_{2}}\right)^{2}}\right]$, and
(ii) if $p_{1} \nless p_{2}$ or $-p_{2} \nless p_{1}$ and if $p_{1} \ngtr p_{2}$ or $p_{1} \nless-p_{2}$, then $\operatorname{SqCirc}^{-1}(p)=$ $\left[p_{1} \cdot \sqrt{1+\left(\frac{p_{2}}{p_{1}}\right)^{2}}, p_{2} \cdot \sqrt{1+\left(\frac{p_{2}}{p_{1}}\right)^{2}}\right]$.
(41) Let $X$ be a non empty topological space and $f_{1}, f_{2}$ be maps from $X$ into $\mathbb{R}^{\mathbf{1}}$. Suppose $f_{1}$ is continuous and $f_{2}$ is continuous and for every point $q$ of $X$ holds $f_{2}(q) \neq 0$. Then there exists a map $g$ from $X$ into $\mathbb{R}^{\mathbf{1}}$ such that
(i) for every point $p$ of $X$ and for all real numbers $r_{1}, r_{2}$ such that $f_{1}(p)=r_{1}$ and $f_{2}(p)=r_{2}$ holds $g(p)=r_{1} \cdot \sqrt{1+\left(\frac{r_{1}}{r_{2}}\right)^{2}}$, and
(ii) $g$ is continuous.
(42) Let $X$ be a non empty topological space and $f_{1}, f_{2}$ be maps from $X$ into $\mathbb{R}^{\mathbf{1}}$. Suppose $f_{1}$ is continuous and $f_{2}$ is continuous and for every point $q$ of $X$ holds $f_{2}(q) \neq 0$. Then there exists a map $g$ from $X$ into $\mathbb{R}^{\mathbf{1}}$ such that
(i) for every point $p$ of $X$ and for all real numbers $r_{1}, r_{2}$ such that $f_{1}(p)=r_{1}$ and $f_{2}(p)=r_{2}$ holds $g(p)=r_{2} \cdot \sqrt{1+\left(\frac{r_{1}}{r_{2}}\right)^{2}}$, and
(ii) $g$ is continuous.
(43) Let $K_{1}$ be a non empty subset of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ into $\mathbb{R}^{\mathbf{1}}$. Suppose that
(i) for every point $p$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $p \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $f(p)=p_{1} \cdot \sqrt{1+\left(\frac{p_{2}}{p_{1}}\right)^{2}}$, and
(ii) for every point $q$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $q \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $q_{1} \neq 0$.
Then $f$ is continuous.
(44) Let $K_{1}$ be a non empty subset of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ into $\mathbb{R}^{1}$. Suppose that
(i) for every point $p$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $p \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $f(p)=p_{2} \cdot \sqrt{1+\left(\frac{p_{2}}{p_{1}}\right)^{2}}$, and
(ii) for every point $q$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $q \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $q_{1} \neq 0$.

Then $f$ is continuous.
(45) Let $K_{1}$ be a non empty subset of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ into $\mathbb{R}^{1}$. Suppose that
(i) for every point $p$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $p \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $f(p)=p_{\mathbf{2}} \cdot \sqrt{1+\left(\frac{p_{1}}{p_{2}}\right)^{2}}$, and
(ii) for every point $q$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $q \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $q_{2} \neq 0$.
Then $f$ is continuous.
(46) Let $K_{1}$ be a non empty subset of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ into $\mathbb{R}^{\mathbf{1}}$. Suppose that
(i) for every point $p$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $p \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $f(p)=p_{1} \cdot \sqrt{1+\left(\frac{p_{1}}{p_{2}}\right)^{2}}$, and
(ii) for every point $q$ of $\mathcal{E}_{\mathrm{T}}^{2}$ such that $q \in$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{1}$ holds $q_{2} \neq 0$.
Then $f$ is continuous.
(47) Let $K_{0}, B_{0}$ be subsets of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{0}$ into $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$. Suppose $f=\operatorname{SqCirc}^{-1} \mid K_{0}$ and $B_{0}=$ (the carrier of $\left.\mathcal{E}_{\mathrm{T}}^{2}\right) \backslash\left\{0_{\mathcal{E}_{T}^{2}}\right\}$ and $K_{0}=\left\{p:\left(p_{2} \leqslant p_{1} \wedge-p_{1} \leqslant p_{2} \vee p_{2} \geqslant p_{1} \wedge p_{2} \leqslant-p_{1}\right) \wedge p \neq 0_{\mathcal{E}_{T}^{2}}\right\}$. Then $f$ is continuous.
(48) Let $K_{0}, B_{0}$ be subsets of $\mathcal{E}_{\mathrm{T}}^{2}$ and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright K_{0}$ into $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$. Suppose $f=\mathrm{SqCirc}^{-1} \mid K_{0}$ and $B_{0}=$ (the carrier of $\left.\mathcal{E}_{\mathrm{T}}^{2}\right) \backslash\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$ and $K_{0}=\left\{p:\left(p_{1} \leqslant p_{2} \wedge-p_{2} \leqslant p_{1} \vee p_{1} \geqslant p_{2} \wedge p_{1} \leqslant-p_{2}\right) \wedge p \neq 0_{\mathcal{E}_{T}^{2}}\right\}$. Then $f$ is continuous.
(49) Let $B_{0}$ be a subset of $\mathcal{E}_{\mathrm{T}}^{2}, K_{0}$ be a subset of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$, and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0} \upharpoonright K_{0}$ into $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$. Suppose $f=\mathrm{SqCirc}^{-1} \upharpoonright K_{0}$ and $B_{0}=$ (the carrier of $\left.\mathcal{E}_{\mathrm{T}}^{2}\right) \backslash\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$ and $K_{0}=\left\{p:\left(p_{2} \leqslant p_{1} \wedge-p_{1} \leqslant p_{2} \vee p_{2} \geqslant\right.\right.$ $\left.\left.p_{\mathbf{1}} \wedge p_{\mathbf{2}} \leqslant-p_{\mathbf{1}}\right) \wedge p \neq 0_{\mathcal{E}_{T}^{2}}\right\}$. Then $f$ is continuous and $K_{0}$ is closed.
(50) Let $B_{0}$ be a subset of $\mathcal{E}_{\mathrm{T}}^{2}, K_{0}$ be a subset of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$, and $f$ be a map from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0} \upharpoonright K_{0}$ into $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright B_{0}$. Suppose $f=\operatorname{SqCirc}^{-1} \upharpoonright K_{0}$ and $B_{0}=$ (the carrier of $\left.\mathcal{E}_{\mathrm{T}}^{2}\right) \backslash\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$ and $K_{0}=\left\{p:\left(p_{\mathbf{1}} \leqslant p_{\mathbf{2}} \wedge-p_{\mathbf{2}} \leqslant p_{1} \vee p_{1} \geqslant\right.\right.$ $\left.\left.p_{2} \wedge p_{1} \leqslant-p_{2}\right) \wedge p \neq 0_{\mathcal{E}_{T}^{2}}\right\}$. Then $f$ is continuous and $K_{0}$ is closed.
(51) Let $D$ be a non empty subset of $\mathcal{E}_{\mathrm{T}}^{2}$. Suppose $D^{\mathrm{c}}=\left\{0_{\mathcal{E}_{\mathrm{T}}^{2}}\right\}$. Then there exists a map $h$ from $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright D$ into $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright D$ such that $h=\operatorname{SqCirc}^{-1} \upharpoonright D$ and $h$ is continuous.
(52) There exists a map $h$ from $\mathcal{E}_{\mathrm{T}}^{2}$ into $\mathcal{E}_{\mathrm{T}}^{2}$ such that $h=\mathrm{SqCirc}^{-1}$ and $h$ is continuous.
(54) ${ }^{1}(\mathrm{i}) \quad \mathrm{SqCirc}$ is a map from $\mathcal{E}_{\mathrm{T}}^{2}$ into $\mathcal{E}_{\mathrm{T}}^{2}$,
(ii) $\operatorname{rng}$ SqCirc $=$ the carrier of $\mathcal{E}_{\mathrm{T}}^{2}$, and

[^0](iii) for every map $f$ from $\mathcal{E}_{\mathrm{T}}^{2}$ into $\mathcal{E}_{\mathrm{T}}^{2}$ such that $f=\operatorname{SqCirc}$ holds $f$ is a homeomorphism.
(55) Let $f, g$ be maps from $\mathbb{I}$ into $\mathcal{E}_{\mathrm{T}}^{2}, C_{0}, K_{3}, K_{4}, K_{5}, K_{6}$ be subsets of $\mathcal{E}_{\mathrm{T}}^{2}$, and $O, I$ be points of $\mathbb{I}$. Suppose that $O=0$ and $I=1$ and $f$ is continuous and one-to-one and $g$ is continuous and one-to-one and $C_{0}=$ $\{p:|p| \leqslant 1\}$ and $K_{3}=\left\{q_{1} ; q_{1}\right.$ ranges over points of $\mathcal{E}_{\mathrm{T}}^{2}:\left|q_{1}\right|=1 \wedge\left(q_{1}\right)_{2} \leqslant$ $\left.\left(q_{1}\right)_{\mathbf{1}} \wedge\left(q_{1}\right)_{\mathbf{2}} \geqslant-\left(q_{1}\right)_{\mathbf{1}}\right\}$ and $K_{4}=\left\{q_{2} ; q_{2}\right.$ ranges over points of $\mathcal{E}_{\mathrm{T}}^{2}$ : $\left.\left|q_{2}\right|=1 \wedge\left(q_{2}\right)_{\mathbf{2}} \geqslant\left(q_{2}\right)_{\mathbf{1}} \wedge\left(q_{2}\right)_{\mathbf{2}} \leqslant-\left(q_{2}\right)_{\mathbf{1}}\right\}$ and $K_{5}=\left\{q_{3} ; q_{3}\right.$ ranges over points of $\left.\mathcal{E}_{\mathrm{T}}^{2}:\left|q_{3}\right|=1 \wedge\left(q_{3}\right)_{\mathbf{2}} \geqslant\left(q_{3}\right)_{\mathbf{1}} \wedge\left(q_{3}\right)_{\mathbf{2}} \geqslant-\left(q_{3}\right)_{\mathbf{1}}\right\}$ and $K_{6}=\left\{q_{4} ; q_{4}\right.$ ranges over points of $\left.\mathcal{E}_{\mathrm{T}}^{2}:\left|q_{4}\right|=1 \wedge\left(q_{4}\right)_{\mathbf{2}} \leqslant\left(q_{4}\right)_{\mathbf{1}} \wedge\left(q_{4}\right)_{\mathbf{2}} \leqslant-\left(q_{4}\right)_{\mathbf{1}}\right\}$ and $f(O) \in K_{4}$ and $f(I) \in K_{3}$ and $g(O) \in K_{6}$ and $g(I) \in K_{5}$ and $\operatorname{rng} f \subseteq C_{0}$ and $\operatorname{rng} g \subseteq C_{0}$. Then rng $f \cap \operatorname{rng} g \neq \emptyset$.
